

## Contribution to the theory of two-dimensional polar harmonics

S. Chalupka, E. Vargová

Department of Theoretical Physics and Geophysics, Faculty of Natural  
Science, P. J. Šafárik University<sup>1</sup>

**Abstract:** The article presents a possibility to express two dimensional harmonic functions in form of series of the so called external harmonic functions in the lower half-plane and in the same time dependence of the coefficients of this expansion on their Fourier transform.

**Key words:** two-dimensional harmonic functions, Fourier transform
