

Analytical continuation of the components of the gravitational field based on Fourier transformation

S. Chalupka, E. Vargová
Institute of Physics, Faculty of Natural Science, P. J. Šafárik University¹

Abstract: Based on polar harmonic functions and Fourier transformation the analytical continuation of the external gravitational field of masses, distributed in a finite region in the half plane $y < 0$ is carried out, using complex variable.

Key words: polar harmonics, Fourier transformation, analytical continuation
